

Technical data sheet

ASAP Gemini

This product is a unique and complete membrane system for wrapping and transporting the dead or used as inline draping of coffins/caskets.

With a white and soft surface and a pure white backside of water proof bio film, the membrane is suitable as a presentable part of the coffin/casket interior.

With high absorbing capacity it effectively collects any fluids and prevents leakage.

Tapes along the sides fastens the sheet quickly in the correct position to ensure it

ASAP Norway AS

develops laminates of textile for the future and is proud to present the first product series with several unique characteristics. The material is a 0.7mm thick, ultra high-absorbency laminate. It can absorb 10 L/m² and is capable of lifting a load of 150kg.

Equipped with a colored bio-film barrier, this product is both waterproof and breaths. It also provides odor protection.

All products are environmentally friendly and labeled with the high demanding Nordic Eco-label, "The Swan".

«The future uses smarter membranes»

Total control of potential leakage.
